High Performance Surface coatings

Product description:

ANTICOR- FR is a single pack fire retardant anti corrosion coating for metal structures which is based on high performance grafted co polymer technology.

Product highlights:

- Resistance to Fire.
- Excellent Corrosion Resistance
- Quick Drying at ambient temperature
- Excellent Resistance to UV radiation
- Excellent Resistance to Chemicals
- Excellent Outdoor Stability
- Available in all desired colour shades

Unique properties:

Fire Spread Index – 5
Smoke Developed Index – 0

Performance properties:

High Performance Surface coatings

Polymers... beyond imagination

Film thickness and spreading rate:

- Film thickness, dry (µm) (DFT) 35-40 Microns per coats (Rec. 3 coats)
- Theoretical spreading rate (m²/l) 5.5-6.0 m² per coat

Recommended use:

A universal formulation specifically designed for use on metal structures as a Fire Retardant Coating in various environmental conditions. It also gives a desired finish. It gives excellent corrosion protection in the most aggressive conditions. ANTICOR-FR offers excellent Aging & weathering resistance coupled with resistance to chemicals.

Surface preparation:

All surfaces should be clean, dry and free from contamination. The surface should be assessed and treated in accordance with ISO 8504. Bare steel Cleanliness: Blast-cleaning to Sa 2½ (ISO-8501-1:2007). Power tool cleaning to min. St 2 (ISO 8501-1:2007) may be acceptable, subject to exposure conditions. Blast Cleaning should be done after solvent wipe (SSPC SP1) to ensure removal of all dust, dirt, oil, grease, etc.

Surface conditions:

- Temperature of the substrate - Minimum 3°C above the dew point of the air temperature
- Relative humidity - Maximum 80 % measured in the vicinity of the substrate.
- Ventilation - Good ventilation is required in confined areas

Do not use heated air until the solvents (Thinner) have evaporated (flashed off) from the paint film to avoid surface drying and solvent entrapment. During application and the initial drying of the coating, the object should not be exposed to high humidity as this can result in loss of gloss.

Application methods:

- Spray - Use Airless Spray or Air Assisted Spray
- Brush - Recommended for stripe coating and small areas, care must be taken to achieve the specified dry film thickness.
- Roller - May be used for small areas, however when using roller application care must be taken to apply sufficient material in order to achieve the specified dry film thickness.

Application data:

- Mixing ratio - Single Pack System. (No Mixing of Two Components)
- Pot life - No Pot Life (Can be used for six months after opening the Container) Viscosity if needed can be adjusted with special solvent THINNER SK13
High Performance Surface coatings

Polymers... beyond imagination

Guiding data airless spray:

Pressure at nozzle - 15 MPa (150 kg/cm², 2100 psi)
Nozzle tip - 0.43-0.79 mm (0.017-0.031") Suitable
Spray angle - 40-80°
Filter Check to ensure that filters are clean.

Drying time:

Drying times are generally related to air circulation, temperature, film thickness and number of coats, and will be affected correspondingly. The figures given in the table are typical with: * Good ventilation (Outdoor exposure or free circulation of air) *

Handling of coated jobs:

Do not stack coated components one over other immediately after coating.

Use Nylon ropes or Wire ropes with rubber padding at contact areas to shift the components after coating is dry to handle.

Storage:

The product must be stored in accordance with national regulations. Storage conditions are to keep the containers in a dry, cool, well ventilated space and away from source of heat and ignition. Containers must be kept tightly closed.

Handling:

Handle with care. Stir well before use. Do not leave the container open after use. Make it air tight.

Packing size:

20 liters Metal Containers
Health and safety:

Please observe the precautionary notices displayed on the container and in our MSDS. Use under well ventilated conditions. Do not breathe or inhale mist. Avoid skin contact. Spillage on the skin should immediately be removed with suitable cleanser, soap and water. Eyes should be well flushed with water and medical attention sought immediately. For detailed information on the health and safety hazards and precautions for use of this product, we refer to the Material Safety Data Sheet.

Disclaimer:

The information in this data sheet is given to the best of our knowledge based on laboratory testing and practical experience. However, as the product can be used under conditions beyond our control, we can only guarantee the quality of the product itself. We also reserve the right to change the given data without notice. Minor product variations may be implemented in order to comply with local requirements.
